

TACOVENT AIRSCOOP D

AIR SEPARATOR

ADVANTAGES

- High air separation capacity
- Strong robust design
- Service and maintenance-free structure

Permanent air separation.

DESCRIPTION

The air separator is fitted in the inlet pipe immediately behind the heating source. This is the point with the highest concentration of air and gas driven out of the water.

The expansion occurring inside the AirScoop and the built-in deflectors speed up the process of separating air and water.

When combined with the float air vent TacoVent HyVent, this system ensures air separation as well as elimination.

INSTALLATION POSITION

The air separator may only be installed horizontally. The direction of flow must be kept in mind.

OPERATION

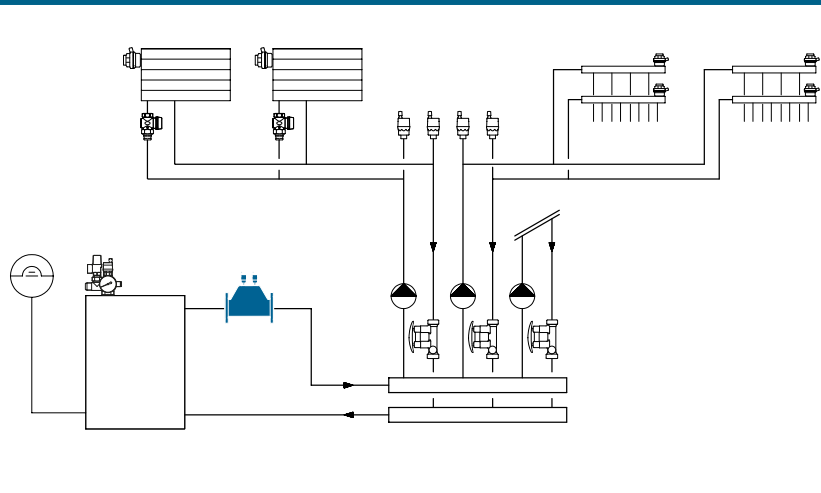

The air expelled from the water into the heating circuit enters the air separator device as air bubbles. The flow-deflector in the housing drives the air bubbles to the top. The collected air is automatically vented via the TacoVent HyVent. The air-separation capacity can be increased by installing a straight piece of piping of approx. 0.5 m in length upstream the separator.

BUILDING CATEGORIES

For pipe installations in heating area:

- Apartment blocks, housing estates, multiple dwelling units
- Residential care facilities, hospitals
- Administration and service buildings
- Hotels and restaurants
- School buildings and sports facilities
- Commercial and industrial buildings

TECHNICAL DATA

General

- Operating temperature $T_{0 \max}$: 135 °C
with float vent valve $T_{0 \max}$: 115 °C
- Operating pressure $P_{0 \max}$: 10 bar

Material

- Housing in cast iron GG 25, lacquered

Fluids

- Heating water
(VDI 2035; SWKI BT 102-01;
ÖNORM H 5195-1)

TYPE OVERVIEW

TacoVent AirScoop DH | Air separator (horizontal), thread connection
